TEST REPORT

Aura Dinings App

iOS Platform · Functional, UI & Bug Testing

Date: May 5, 2026 · Platform: iPhone (iOS) · Prepared by: QA Tester

EXECUTIVE SUMMARY

2	8	6	4
Critical Bugs	Warnings	Tests Passed	Recommendations

The app has a strong visual identity and a well-functioning booking flow. However, two critical bugs are blocking new users from accessing checkout: (1) the sign-up form cannot be completed due to phone number validation errors, and (2) the guest flow redirects users back to the home screen, losing their cart. Both issues must be prioritised and fixed before launch.

1. Critical Bugs 🚨

These bugs block core functionality and must be fixed immediately before launch.

Observation 5: Guest Flow Redirects to Home Screen (Critical)

Field	Details
Screen	Restaurant list (home screen)
Status	🚨 Critical
Bug	After tapping 'Continue as Guest', the user is sent back to the home screen – the cart item is lost
Expected	User should be returned to the product they were adding, with the item retained in the cart
Impact	High drop-off rate – user must start the entire flow from scratch
Recommendation	Preserve cart in session storage and redirect user back to the product page after guest login

Observation 13: Sign Up Blocked by Phone Validation (Critical)

Field	Details
Screen	Sign Up form
Status	🚨 Critical
Bug 1	Phone number field has a character limit that stops at 10 characters – impossible to enter '+45' and an 8-digit number
Bug 2	No indication of the expected format – user has no guidance on what to enter
Impact	No new users can create an account – this is a showstopper bug
Recommendation	Add a country code dropdown (as in the booking flow), remove the character limit, and show an example: '+45 12345678'

2. Warnings & UX Issues ⚠️

Observation 2: Dosa Bar Logo Overlaps Navigation

Field	Details
Screen	Menu page – Dosa Bar
Status	⚠️ Warning
Bug	The restaurant logo is positioned on top of the bottom navigation bar and overlaps page content
Assessment	Layout bug – looks unfinished and may interfere with navigation
Recommendation	Adjust z-index and position of the logo element so it does not overlap UI components

Observation 3: Inconsistent Price Formatting

Field	Details
Screen	Product detail page
Status	⚠️ Warning
Bug	Main item shows '79 Kr' (capital K, no period); related items show '85 kr.' and '95 kr.'
Assessment	Inconsistency appears unprofessional
Recommendation	Standardise price format to a single style, e.g. '79 kr.' (lowercase k, with period)

Observation 4: Misleading Login Popup

Field	Details
Screen	Login screen
Status	⚠️ Warning
Bug	Popup says 'Please login to add items' – but a guest option is available on the same screen
Bug 2	Login form is visible behind the popup overlay – looks cluttered
Recommendation	Update message to e.g. 'Login or continue as guest to add items' and blur/dim the background behind the popup

Observation 6: Empty Reservation Landing Page

Field	Details
Screen	Book a Table – landing page
Status	⚠️ Warning
Bug	Page only shows an illustration and a button – no restaurant info, opening hours or context for the user
Illustration	The waiter in the illustration is wearing a face mask – a COVID-era design that feels outdated
Recommendation	Add restaurant info and replace the illustration with a more current visual

Observation 7: Inconsistent Language in Booking Flow

Field	Details
Screen	Booking form (easyTable)
Status	⚠️ Warning
Bug	The booking flow is in Danish ('Gaester', 'Dato', 'Bekaeft booking') while the rest of the app is in English
Cause	Third-party system (easyTable.com) with Danish language settings
Footer	'© 2020 easyTable.com' is displayed – outdated and unprofessional within a branded app
Recommendation	Set the easyTable integration language to English and hide or white-label the footer branding

Observation 11: Missing Password Requirements + Security Issue

Field	Details
Screen	Sign Up form
Status	⚠️ Warning
Bug 1	No password requirements shown – user does not know what is expected (min. length, uppercase, etc.)
Bug 2	'Show password' icon is active by default – password is visible in plain text during sign-up
Recommendation	Display password requirements below the field and set 'hide password' as the default state

Observation 10: Truncated Newsletter Text + Lost Guest Cart

Field	Details

Screen	Confirm booking / Cart
Status	⚠️ Warning
Bug 1	Newsletter checkbox text is cut off: 'Yes please, to emails with offers and news from Dosa' – missing the end
Bug 2	Guest users cannot see their cart after completing the login flow – cart is reset
Recommendation	Fix newsletter text length and preserve cart session through the guest flow

3. Tests Passed ✅

Test	Screen	Result
Splash screen loads correctly	Aura Dinings splash	✅ Passed
Restaurant list displays with images	Home / restaurant list	✅ Passed
Product detail page opens from menu	Idly With Sambar	✅ Passed
'You may also like' section displays	Product detail page	✅ Passed
Booking flow completes (Guests > Date > Time > Confirm)	easyTable booking	✅ Passed
Date picker shows correct dates and greys out the past	Date picker	✅ Passed

4. Recommendations – Inspired by Hubb Kitchens

The Hubb Kitchens app demonstrates several strong features that Aura Dinings could draw inspiration from:

Feature	Hubb Kitchens	Recommendation for Aura Dinings
Onboarding	Dedicated login/sign-up screen with personalised 'Welcome back!' greeting	Add a proper onboarding screen with login, sign-up and guest option – BEFORE the user sees the restaurant list
Rewards & Challenges	Progress bar with 'Spend 1,000kr, get a 100kr voucher' and visual status tracker	Introduce a loyalty programme with challenges and visible progress to drive repeat orders
Refer a Friend	'Invite a friend and get a free dessert' with clear call-to-action	A referral programme can drive organic user acquisition at low cost
Profile Menu	Rich menu: order history, addresses, payment cards, vouchers, support chat, terms	Expand the profile section with these items – especially order history and saved payment info
Restaurant Selector	Shows opening hours, delivery/pickup options and 'Opens at XX:XX today'	Add opening hours and delivery info directly on the restaurant card
Language Consistency	Consistent Danish language throughout the entire app including third-party integrations	Standardise language – either consistently Danish or consistently English across all screens

5. Prioritised Action List

Priority	Bug / Task	Category
P1 – Urgent	Fix phone number validation in Sign Up (character limit + format guidance)	Critical bug
P1 – Urgent	Fix guest flow: preserve cart and redirect user back to product page	Critical bug
P2 – High	Fix logo overlap on menu page (Dosa Bar)	UI bug
P2 – High	Update login popup text and dim background behind overlay	UX
P2 – High	Standardise price format (lowercase 'kr.' with period)	UI
P3 – Medium	Update reservation illustration (remove face mask)	UI
P3 – Medium	Set easyTable to English and hide 2020 footer branding	UX
P3 – Medium	Show password requirements and set 'hide password' as default	Security / UX
P3 – Medium	Fix truncated newsletter text in booking flow	UI
P4 – Low	Add onboarding screen inspired by Hubb Kitchens	Recommendation
P4 – Low	Add rewards/challenges and refer-a-friend features	Recommendation
P4 – Low	Expand profile menu with order history, addresses, payment cards	Recommendation
